# 1. Introducción

En el siguiente reporte, se llevo a cabo el diseño y la implementación de un detector de máscara facial mediante el microcontrolador Arduino uno 33 BLE y la pagina de Edge Impulse. Se armó un Dataset para entrenar el modelo, el cual debe de reconocer si hay una persona y además decir si tiene o no mascarilla. Para cada caso debe encender un LED de un color en específico. Link del repositorio: <https://github.com/dagueroc/Laboratorio-de-Microcontroladores.git>

## 2. Nota teórica

### 2.1. Microcontrolador Arduino Nano 33 BLE

El Arduino Nano 33 BLE es una placa de desarrollo basada en el microcontrolador nRF52840 de Nordic Semiconductor. Está diseñada para aplicaciones de IoT (Internet de las Cosas) y proyectos de baja energía que requieren conectividad Bluetooth., las características específicas son las siguientes:

1. Chip: nRF52840 (Cortex-M4 a 64 MHz)
2. Memoria Flash: 1 MB
3. RAM: 256 KB
4. Bluetooth Low Energy (BLE) 5.0
5. NFC (Near Field Communication)
6. Sensores Integrados
7. IMU: Acelerómetro y giroscopio de 9 ejes (LSM9DS1)
8. Sensor de temperatura
9. micrófono MP34DT05
10. GPIO: 14 pines digitales I/O (12 con PWM)
11. 8 entradas analógicas (ADC 12 bits)
12. Voltaje Operativo: 3.3V
13. Tolerancia de 5V en algunos pines
14. Puede ser programado usando el lenguaje Arduino (similar a C/C++)

## 2.2. Diagrama de pines

A continuación, el microcontrolador tiene el siguiente diagrama de pines:

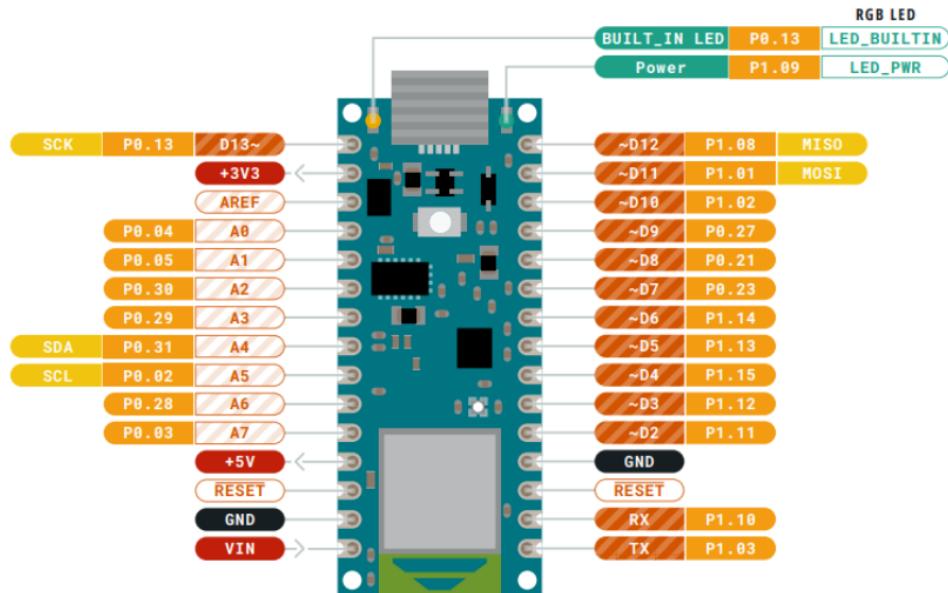

Figura 1: Diagrama de bloques

## 2.3. Componentes

Para el laboratorio se utilizaron los componentes integrados del kit de machine learning del Arduino Nano 33 BLE, el shield del kit y su modulo de cámara.

Figura 2: Componentes

### 3. Desarrollo/Análisis de resultados

#### 3.1. Análisis electrónico

No se ocupó realizar ningún análisis electrónico o eléctrico para este laboratorio

#### 3.2. Análisis del programa

Para el desarrollo del Laboratorio, el punto de partida fue entrenar el modelo utilizando datos. Se le pidió a varias personas que tomaran fotografías mostrando diferentes situaciones, que cumplirían con la condición de uso o no de las mascarilla. Contar con un conjunto de datos bien equilibrado es crucial para asegurar que el modelo de aprendizaje automático pueda generalizar adecuadamente y no esté sesgado hacia una clase particular. Por ello, también se recabaron fotografías de un extenso dataset de distintas personas para evitar el desequilibrio en los datos, que puede ocurrir si hay más muestras de una clase que de otra. Un conjunto de datos desequilibrado puede llevar a que el modelo favorezca la clase con más muestras, ignorando o clasificando incorrectamente las clases menos representadas. Por lo tanto, se buscó entrenar el modelo con una cantidad equilibrada de fotografías.

Para lograrlo, se utilizó la plataforma de Edge Impulse, ya que facilita el equilibrio de los conjuntos de datos. Edge Impulse proporciona herramientas y funcionalidades que permiten a los usuarios dividir fácilmente los datos en conjuntos de entrenamiento y prueba, manteniendo un equilibrio proporcional entre las diferentes clases. Esto se consigue seleccionando un porcentaje adecuado de datos para cada conjunto, asegurando que cada clase esté igualmente representada tanto en el conjunto de entrenamiento como en el de prueba.

#### 3.3. Resultados del modelo

Luego de la alimentación del modelo y el respectivo procesamiento de las señales, se obtuvieron los siguientes resultados en la precisión del modelo.

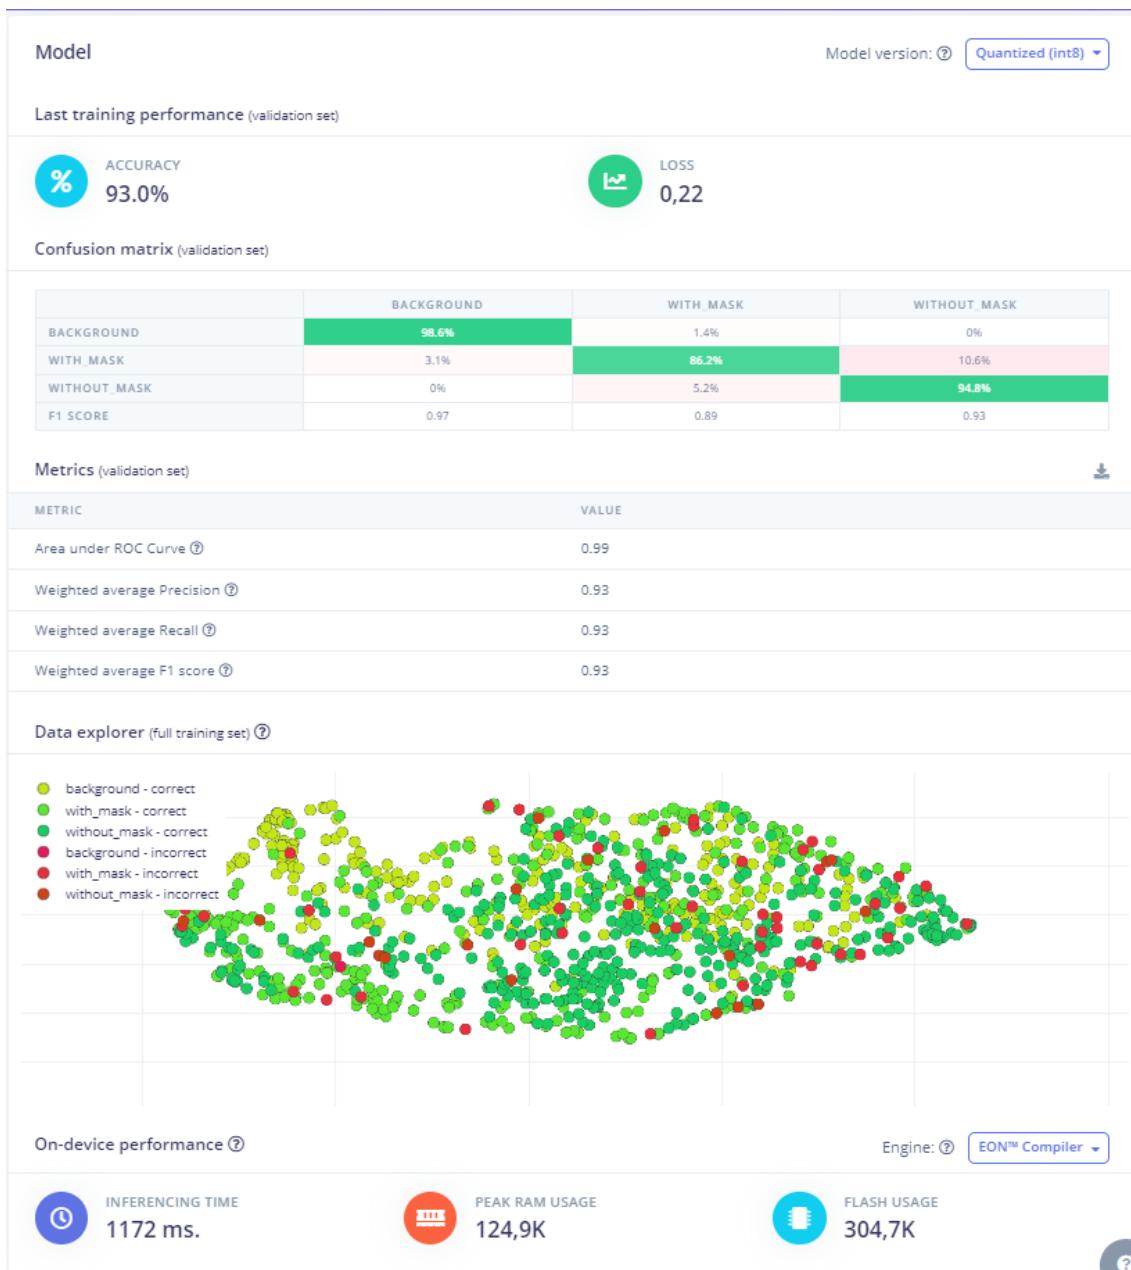

Figura 3: Resultados Obtenidos con el modelo implementado

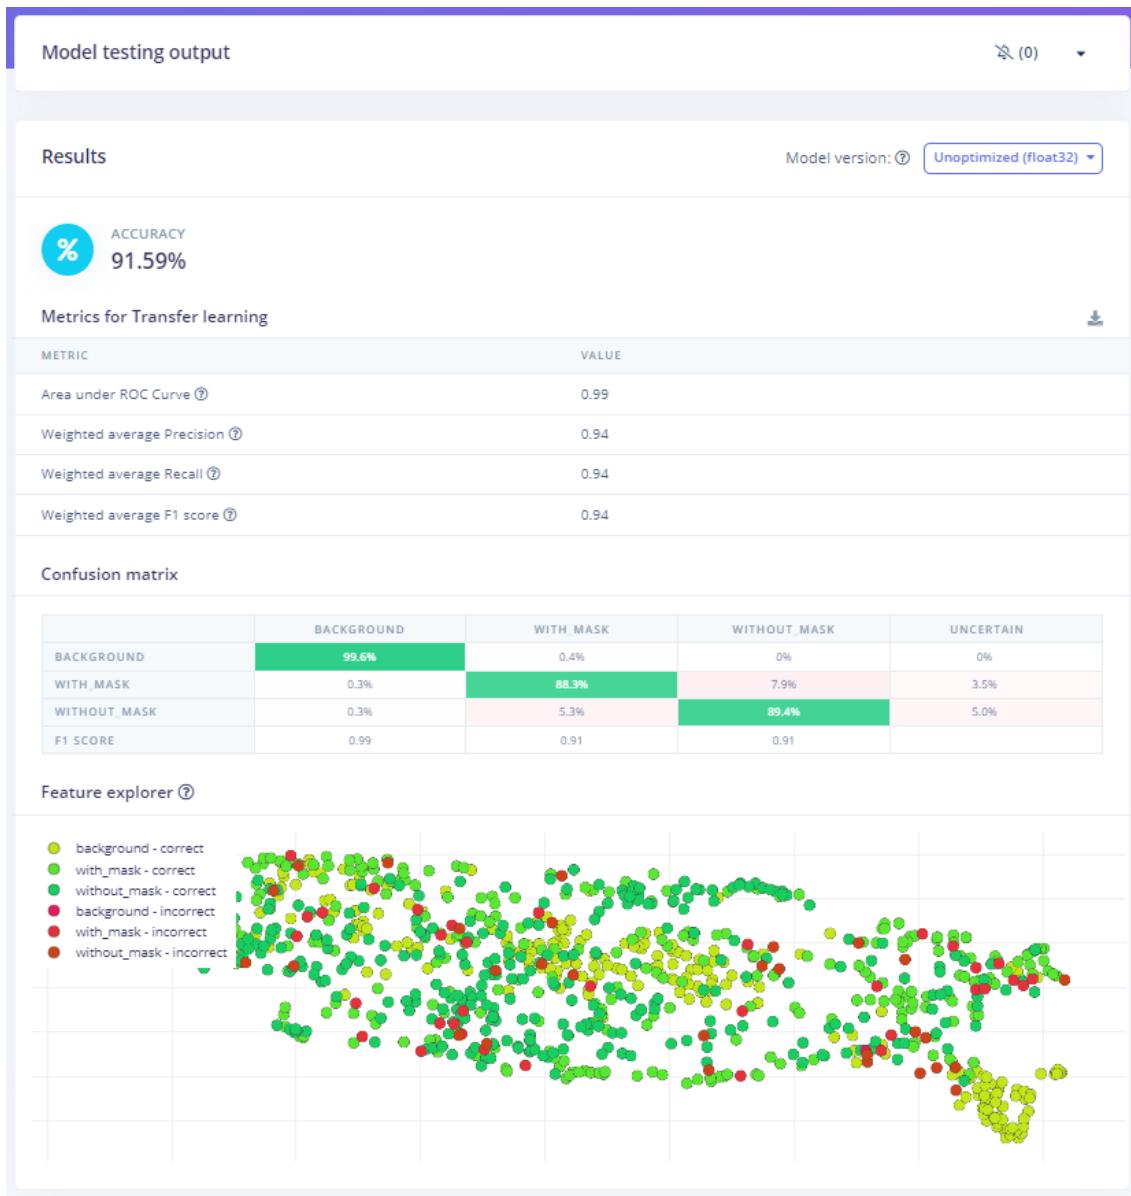

Figura 4: Resultados Obtenidos con el modelo implementado

### 3.4. Implementación del código

Seguidamente, ya con el modelo en funcionamiento, se exporta como librería. Esto se realizo con el fin de que el Arduino Nano Sense 33 BLE pueda cumplir su función inicial propuesta de funcionar como detector de mascara facial. Se tomo el ejemplo de la librería exportada llamado nano\_ble33 sense camara y se ajustó para que imprimiera los datos deseados por consola y además controlar los LEDs en función del reconocimiento que haga.

Para hacer funcionar el LED RGB se empleo el siguiente código:

```
if (result.classification[0].value > 0.8) {
```

```
    setColor(255, 255, 0); // Enciende el LED
} else if (result.classification[1].value > 0.8) {
    setColor(255, 0, 255); // Apaga el LED
} else if (result.classification[2].value > 0.8) {
    setColor(0, 255, 255); // Apaga el LED
} else {
    setColor(255, 255, 255);
}
```

Siendo la variable `result.classification[x].value` el valor de la etiqueta de la clasificación. Entonces se evalua con `if` la que tuvo una significación superior a 0.8 para encender el LED del respectivo color

### 3.5. Muestra del funcionamiento

```
Starting inferencing in 2 seconds...

## 4. Conclusiones y recomendaciones

- Se cumplió de manera exitosa el objetivo del laboratorio de construir detector de mascarilla con el Arduino Nano 33 BLE
- Es de gran utilidad la plataforma Edge Impulse, facilita enormemente la implementación del modelo de Machine Learning en el Arduino.
- Es altamente recomendado invertir bastante tiempo en la recolección de datos para perfeccionar el modelo a implementar. Además de buscar datasets ya existentes
- Sería interesante hacer una implementación en un STM32, ya que este cuenta con mucha mayor capacidad ROM Y RAM. Ya que esto fue una restricción para importar ciertos modelos creados al Arduino.

## Referencias

## 5. Anexos

### 5.1. Hoja de datos

En próximas páginas se adjuntan las hojas del fabricante cuya información fue necesaria para realizar el procedimiento

## Description

Nano 33 BLE Sense is a miniature sized module containing a NINA B306 module, based on Nordic nRF52480 and containing a Cortex M4F, a crypto chip which can securely store certificates and pre shared keys and a 9 axis IMU. The module can either be mounted as a DIP component (when mounting pin headers), or as a SMT component, directly soldering it via the castellated pads

## Target areas:

Maker, enhancements, IoT application

## Features

- **NINA B306 Module**

- **Processor**

- 64 MHz Arm® Cortex-M4F (with FPU)
    - 1 MB Flash + 256 KB RAM

- **Bluetooth® 5 multiprotocol radio**

- 2 Mbps
    - CSA #2
    - Advertising Extensions
    - Long Range
    - +8 dBm TX power
    - -95 dBm sensitivity
    - 4.8 mA in TX (0 dBm)
    - 4.6 mA in RX (1 Mbps)
    - Integrated balun with 50 Ω single-ended output
    - IEEE 802.15.4 radio support
    - Thread
    - Zigbee

- **Peripherals**

- Full-speed 12 Mbps USB
    - NFC-A tag
    - Arm CryptoCell CC310 security subsystem
    - QSPI/SPI/TWI/I<sup>2</sup>S/PDM/QDEC
    - High speed 32 MHz SPI
    - Quad SPI interface 32 MHz
    - EasyDMA for all digital interfaces
    - 12-bit 200 ksps ADC
    - 128 bit AES/ECB/CCM/AAR co-processor

- **LSM9DS1** (9 axis IMU)

- 3 acceleration channels, 3 angular rate channels, 3 magnetic field channels
    - ±2/±4/±8/±16 g linear acceleration full scale
    - ±4/±8/±12/±16 gauss magnetic full scale
    - ±245/±500/±2000 dps angular rate full scale
    - 16-bit data output

- **LPS22HB** (Barometer and temperature sensor)

- 260 to 1260 hPa absolute pressure range with 24 bit precision
    - High overpressure capability: 20x full-scale
    - Embedded temperature compensation
    - 16-bit temperature data output
    - 1 Hz to 75 Hz output data rateInterrupt functions: Data Ready, FIFO flags, pressure thresholds

- **HTS221** (relative humidity sensor)

- 0-100% relative humidity range
    - High rH sensitivity: 0.004% rH/LSB
    - Humidity accuracy: ± 3.5% rH, 20 to +80% rH
    - Temperature accuracy: ± 0.5 °C, 15 to +40 °C
    - 16-bit humidity and temperature output data

- **APDS-9960** (Digital proximity, Ambient light, RGB and Gesture Sensor)
  - Ambient Light and RGB Color Sensing with UV and IR blocking filters
  - Very high sensitivity – Ideally suited for operation behind dark glass
  - Proximity Sensing with Ambient light rejection
  - Complex Gesture Sensing
- **MP34DT05** (Digital Microphone)
  - AOP = 122.5 dbSPL
  - 64 dB signal-to-noise ratio
  - Omnidirectional sensitivity
  - -26 dBFS ± 3 dB sensitivity
- **ATECC608A** (Crypto Chip)
  - Cryptographic co-processor with secure hardware based key storage
  - Protected storage for up to 16 keys, certificates or data
  - ECDH: FIPS SP800-56A Elliptic Curve Diffie-Hellman
  - NIST standard P256 elliptic curve support
  - SHA-256 & HMAC hash including off-chip context save/restore
  - AES-128 encrypt/decrypt, galois field multiply for GCM
- **MPM3610 DC-DC**
  - Regulates input voltage from up to 21V with a minimum of 65% efficiency @minimum load
  - More than 85% efficiency @12V

## 1 The Board

As all Nano form factor boards, Nano 33 BLE Sense does not have a battery charger but can be powered through USB or headers.

**NOTE:** Arduino Nano 33 BLE Sense only supports 3.3V I/Os and is **NOT** 5V tolerant so please make sure you are not directly connecting 5V signals to this board or it will be damaged. Also, as opposed to Arduino Nano boards that support 5V operation, the 5V pin does NOT supply voltage but is rather connected, through a jumper, to the USB power input.

### 1.1 Ratings

#### 1.1.1 Recommended Operating Conditions

Symbol	Description	Min	Max
	Conservative thermal limits for the whole board:	-40 °C ( 40 °F)	85°C ( 185 °F)

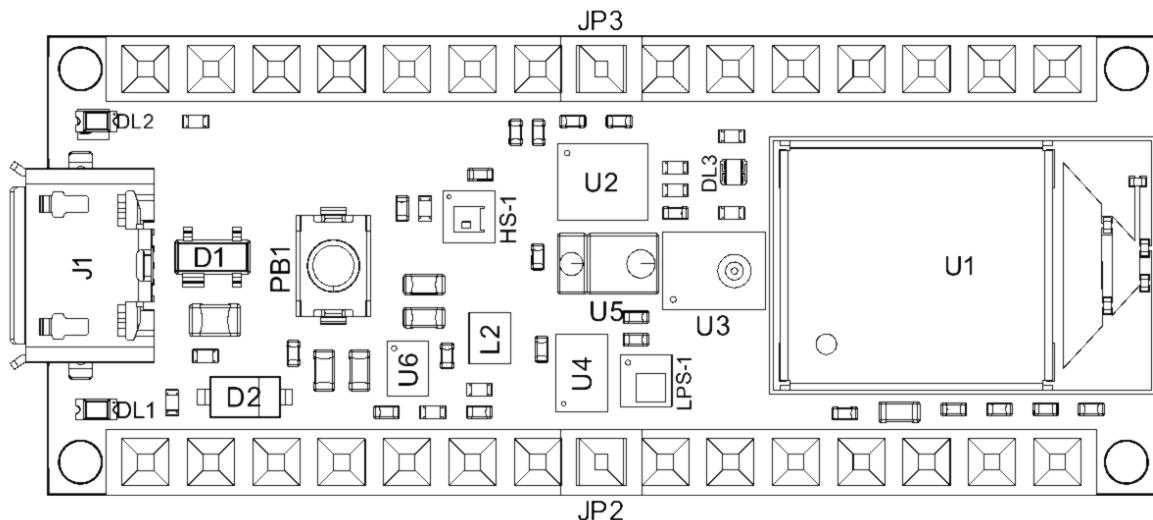

### 1.2 Power Consumption

Symbol	Description	Min	Typ	Max	Unit
PBL	Power consumption with busy loop		TBC		mW
PLP	Power consumption in low power mode		TBC		mW
PMAX	Maximum Power Consumption		TBC		mW

## 2 Functional Overview

## 2.2 Processor

The Main Processor is a Cortex M4F running at up to 64MHz. Most of its pins are connected to the external headers, however some are reserved for internal communication with the wireless module and the on-board internal I<sup>2</sup>C peripherals (IMU and Crypto).

**NOTE:** As opposed to other Arduino Nano boards, pins A4 and A5 have an internal pull up and default to be used as an I<sup>2</sup>C Bus so usage as analog inputs is not recommended.

## 2.3 Crypto

The crypto chip in Arduino IoT boards is what makes the difference with other less secure boards as it provides a secure way to store secrets (such as certificates) and accelerates secure protocols while never exposing secrets in plain text.

Source code for the Arduino Library that supports the Crypto is available [\[8\]](#)

## 2.4 IMU

Arduino Nano 33 BLE has an embedded 9 axis IMU which can be used to measure board orientation (by checking the gravity acceleration vector orientation or by using the 3D compass) or to measure shocks, vibration, acceleration and rotation speed.

Source code for the Arduino Library that supports the IMU is available [\[9\]](#)

## 2.5 Barometer and Temperature Sensor

The embedded Barometer and temperature sensor allow measuring ambient pressure. The temperature sensor integrated with the barometer can be used to compensate the pressure measurement.

Source code for the Arduino Library that supports the Barometer is available [\[10\]](#)

## 2.6 Relative Humidity and Temperature Sensor

Relative humidity sensor measures ambient relative humidity. As the Barometer this sensor has an integrated temperature sensor that can be used to compensate for the measurement.

Source code for the Arduino Library that supports the Humidity sensor is available [\[11\]](#)

## 2.7 Digital Proximity, Ambient Light, RGB and Gesture Sensor

Source code for the Arduino Library that supports the Proximity/gesture/ALS sensor is available [\[12\]](#)

### 2.7.1 Gesture Detection

Gesture detection utilizes four directional photodiodes to sense reflected IR energy (sourced by the integrated LED) to convert physical motion information (i.e. velocity, direction and distance) to a digital information. The architecture of the gesture engine features automatic activation (based on Proximity engine results), ambient light subtraction, cross-talk cancellation, dual 8-bit data converters, power saving inter-conversion delay, 32-dataset FIFO, and interrupt driven I2C communication. The gesture engine accommodates a wide range of mobile device gesturing requirements: simple UP-DOWN-RIGHT-LEFT gestures or more complex gestures can be accurately sensed. Power consumption and noise are minimized with adjustable IR LED timing.

### 2.7.2 Proximity Detection

The Proximity detection feature provides distance measurement (E.g. mobile device screen to user's ear) by photodiode detection of reflected IR energy (sourced by the integrated LED). Detect/release events are interrupt driven, and occur whenever proximity result crosses upper and/ or lower threshold settings. The proximity engine features offset adjustment registers to compensate for system offset caused by unwanted IR energy reflections appearing at the sensor. The IR LED intensity is factory trimmed to eliminate the need for end-equipment calibration due to component variations. Proximity results are further improved by automatic ambient light subtraction.

### 2.7.3 Color and ALS Detection

The Color and ALS detection feature provides red, green, blue and clear light intensity data. Each of the R, G, B, C channels have a UV and IR blocking filter and a dedicated data converter producing 16-bit data simultaneously. This architecture allows applications to accurately measure ambient light and sense color which enables devices to calculate color temperature and control display backlight.

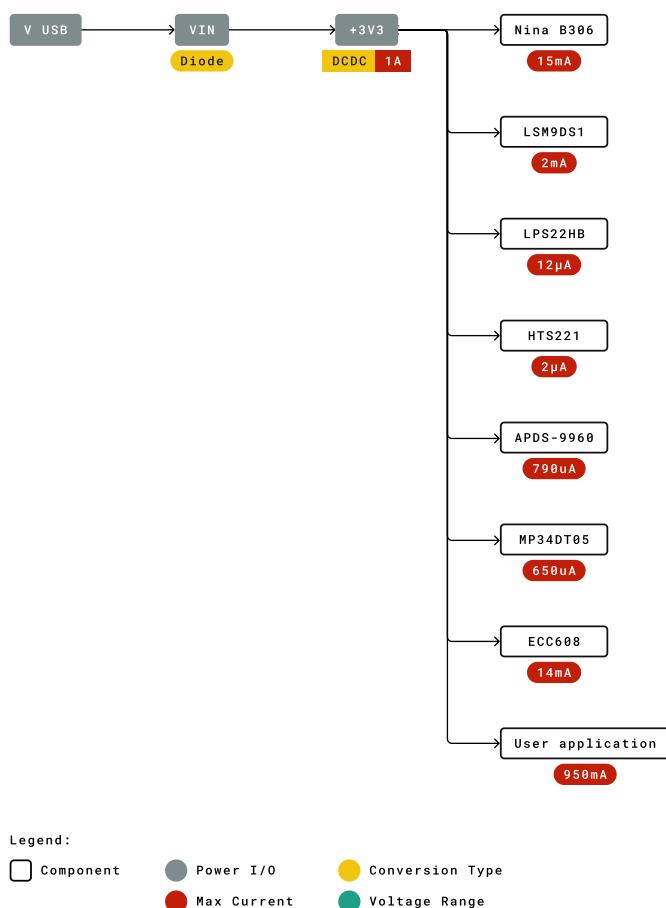

### 2.8 Digital Microphone

The MP34DT05 is an ultra-compact, low-power, omnidirectional, digital MEMS microphone built with a capacitive sensing element and an IC interface.

The sensing element, capable of detecting acoustic waves, is manufactured using a specialized silicon micromachining process dedicated to produce audio sensors

### 2.9 Power Tree

The board can be powered via USB connector,  $V_{IN}$  or  $V_{USB}$  pins on headers.

Power tree

**NOTE:** Since  $V_{USB}$  feeds  $V_{IN}$  via a Schottky diode and a DC-DC regulator specified minimum input voltage is 4.5V the minimum supply voltage from USB has to be increased to a voltage in the range between 4.8V to 4.96V depending on the current being drawn.

## 3 Board Operation

### 3.1 Getting Started - IDE

If you want to program your Arduino Nano 33 BLE while offline you need to install the Arduino Desktop IDE [1] To connect the Arduino Nano 33 BLE to your computer, you'll need a Micro-B USB cable. This also provides power to the board, as indicated by the LED.

### 3.2 Getting Started - Arduino Web Editor

All Arduino boards, including this one, work out-of-the-box on the Arduino Web Editor [2], by just installing a simple plugin.

The Arduino Web Editor is hosted online, therefore it will always be up-to-date with the latest features and support for all boards. Follow [3] to start coding on the browser and upload your sketches onto your board.

### 3.3 Getting Started - Arduino IoT Cloud

All Arduino IoT enabled products are supported on Arduino IoT Cloud which allows you to Log, graph and analyze sensor data, trigger events, and automate your home or business.

### 3.4 Sample Sketches

Sample sketches for the Arduino Nano 33 BLE can be found either in the "Examples" menu in the Arduino IDE or in the "Documentation" section of the Arduino Pro website [4]

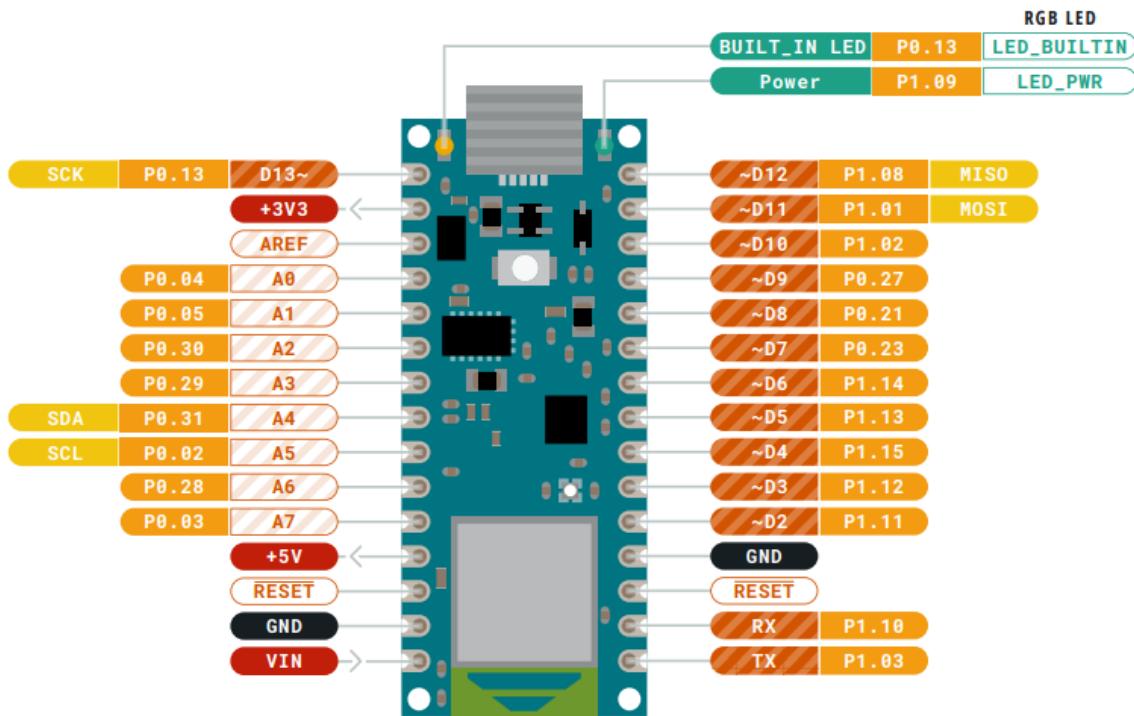

### 3.5 Online Resources

Now that you have gone through the basics of what you can do with the board you can explore the endless possibilities it provides by checking exciting projects on ProjectHub [13], the Arduino Library Reference [14] and the on line store [15] where you will be able to complement your board with sensors, actuators and more.

### 3.6 Board Recovery

All Arduino boards have a built-in bootloader which allows flashing the board via USB. In case a sketch locks up the processor and the board is not reachable anymore via USB it is possible to enter bootloader mode by double-tapping the reset button right after power up.

## 4 Connector Pinouts

Pinout

#### 4.1 USB

Pin	Function	Type	Description
1	VUSB	Power	Power Supply Input. If board is powered via VUSB from header this is an Output (1)
2	D-	Differential	USB differential data -
3	D+	Differential	USB differential data +
4	ID	Analog	Selects Host/Device functionality
5	GND	Power	Power Ground

#### 4.2 Headers

The board exposes two 15 pin connectors which can either be assembled with pin headers or soldered through castellated vias.

Pin	Function	Type	Description
1	D13	Digital	GPIO
2	+3V3	Power Out	Internally generated power output to external devices
3	AREF	Analog	Analog Reference; can be used as GPIO
4	A0/DAC0	Analog	ADC in/DAC out; can be used as GPIO
5	A1	Analog	ADC in; can be used as GPIO
6	A2	Analog	ADC in; can be used as GPIO
7	A3	Analog	ADC in; can be used as GPIO
8	A4/SDA	Analog	ADC in; I2C SDA; Can be used as GPIO (1)
9	A5/SCL	Analog	ADC in; I2C SCL; Can be used as GPIO (1)
10	A6	Analog	ADC in; can be used as GPIO
11	A7	Analog	ADC in; can be used as GPIO
12	VUSB	Power In/Out	Normally NC; can be connected to VUSB pin of the USB connector by shorting a jumper
13	RST	Digital In	Active low reset input (duplicate of pin 18)
14	GND	Power	Power Ground

Pin	Function	Type	Description
15	VIN	Power In	Vin Power input
16	TX	Digital	USART TX; can be used as GPIO
17	RX	Digital	USART RX; can be used as GPIO
18	RST	Digital	Active low reset input (duplicate of pin 13)
19	GND	Power	Power Ground
20	D2	Digital	GPIO
21	D3/PWM	Digital	GPIO; can be used as PWM
22	D4	Digital	GPIO
23	D5/PWM	Digital	GPIO; can be used as PWM
24	D6/PWM	Digital	GPIO, can be used as PWM
25	D7	Digital	GPIO
26	D8	Digital	GPIO
27	D9/PWM	Digital	GPIO; can be used as PWM
28	D10/PWM	Digital	GPIO; can be used as PWM
29	D11/MOSI	Digital	SPI MOSI; can be used as GPIO
30	D12/MISO	Digital	SPI MISO; can be used as GPIO

#### 4.3 Debug

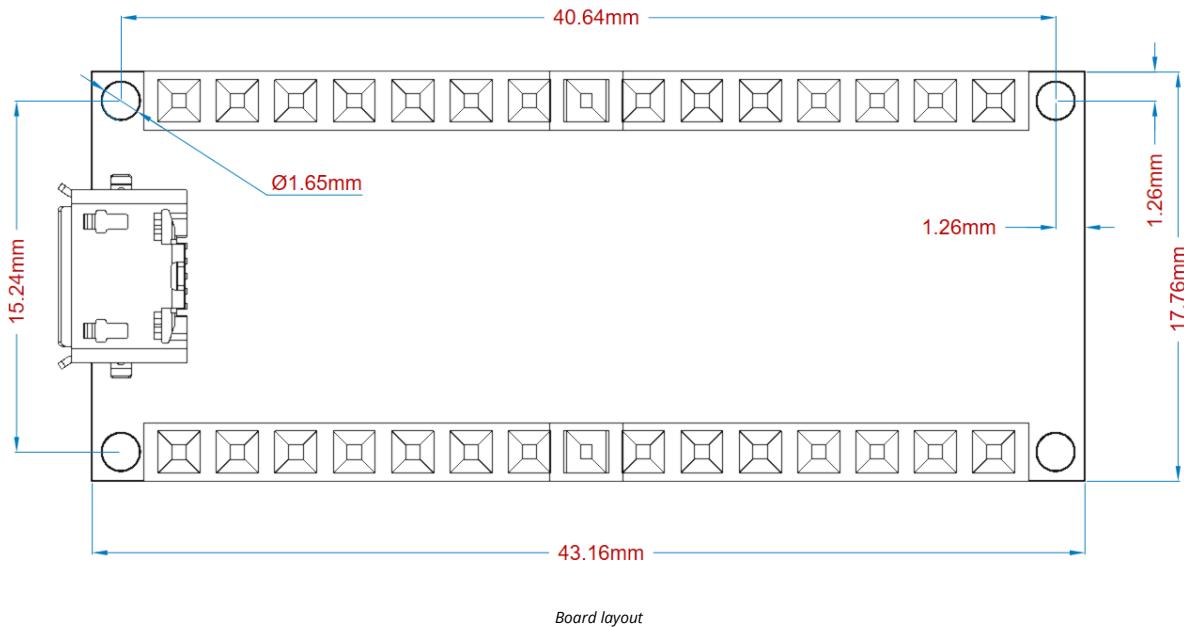

On the bottom side of the board, under the communication module, debug signals are arranged as 3x2 test pads with 100 mil pitch with pin 4 removed. Pin 1 is depicted in Figure 3 – Connector Positions

Pin	Function	Type	Description
1	+3V3	Power Out	Internally generated power output to be used as voltage reference
2	SWD	Digital	nRF52480 Single Wire Debug Data
3	SWCLK	Digital In	nRF52480 Single Wire Debug Clock
5	GND	Power	Power Ground
6	RST	Digital In	Active low reset input

## 5 Mechanical Information

### 5.1 Board Outline and Mounting Holes

The board measures are mixed between metric and imperial. Imperial measures are used to maintain 100 mil pitch grid between pin rows to allow them to fit a breadboard whereas board length is Metric

Board layout

## 6 Certifications

### 6.1 Declaration of Conformity CE DoC (EU)

We declare under our sole responsibility that the products above are in conformity with the essential requirements of the following EU Directives and therefore qualify for free movement within markets comprising the European Union (EU) and European Economic Area (EEA).

### 6.2 Declaration of Conformity to EU RoHS & REACH 211 01/19/2021

Arduino boards are in compliance with RoHS 2 Directive 2011/65/EU of the European Parliament and RoHS 3 Directive 2015/863/EU of the Council of 4 June 2015 on the restriction of the use of certain hazardous substances in electrical and electronic equipment.

Substance	Maximum limit (ppm)
Lead (Pb)	1000
Cadmium (Cd)	100
Mercury (Hg)	1000
Hexavalent Chromium (Cr6+)	1000
Poly Brominated Biphenyls (PBB)	1000
Poly Brominated Diphenyl ethers (PBDE)	1000
Bis(2-Ethylhexyl) phthalate (DEHP)	1000
Benzyl butyl phthalate (BBP)	1000
Dibutyl phthalate (DBP)	1000
Diisobutyl phthalate (DIBP)	1000

Exemptions : No exemptions are claimed.

Arduino Boards are fully compliant with the related requirements of European Union Regulation (EC) 1907 /2006 concerning the Registration, Evaluation, Authorization and Restriction of Chemicals (REACH). We declare none of the SVHCs (<https://echa.europa.eu/web/guest/candidate-list-table>), the Candidate List of Substances of Very High Concern for authorization currently released by ECHA, is present in all products (and also package) in quantities totaling in a concentration equal or above 0.1%. To the best of our knowledge, we also declare that our products do not contain any of the substances listed on the "Authorization List"

(Annex XIV of the REACH regulations) and Substances of Very High Concern (SVHC) in any significant amounts as specified by the Annex XVII of Candidate list published by ECHA (European Chemical Agency) 1907 /2006/EC.

### 6.3 Conflict Minerals Declaration

As a global supplier of electronic and electrical components, Arduino is aware of our obligations with regards to laws and regulations regarding Conflict Minerals, specifically the Dodd-Frank Wall Street Reform and Consumer Protection Act, Section 1502. Arduino does not directly source or process conflict minerals such as Tin, Tantalum, Tungsten, or Gold. Conflict minerals are contained in our products in the form of solder, or as a component in metal alloys. As part of our reasonable due diligence Arduino has contacted component suppliers within our supply chain to verify their continued compliance with the regulations. Based on the information received thus far we declare that our products contain Conflict Minerals sourced from conflict-free areas.

## 7 FCC Caution

Any Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

- (1) This device may not cause harmful interference
- (2) this device must accept any interference received, including interference that may cause undesired operation.

#### FCC RF Radiation Exposure Statement:

1. This Transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.
2. This equipment complies with RF radiation exposure limits set forth for an uncontrolled environment.
3. This equipment should be installed and operated with minimum distance 20cm between the radiator & your body.

English: User manuals for license-exempt radio apparatus shall contain the following or equivalent notice in a conspicuous location in the user manual or alternatively on the device or both. This device complies with Industry Canada license-exempt RSS standard(s). Operation is subject to the following two conditions:

- (1) this device may not cause interference
- (2) this device must accept any interference, including interference that may cause undesired operation of the device.

French: Le présent appareil est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes :

- (1) l' appareil nedoit pas produire de brouillage
- (2) l'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

#### IC SAR Warning:

English This equipment should be installed and operated with minimum distance 20 cm between the radiator and your body.

French: Lors de l' installation et de l' exploitation de ce dispositif, la distance entre le radiateur et le corps est d'au moins 20 cm.

**Important:** The operating temperature of the EUT can't exceed 85°C and shouldn't be lower than -40°C.

Hereby, Arduino S.r.l. declares that this product is in compliance with essential requirements and other relevant provisions of Directive 2014/53/EU. This product is allowed to be used in all EU member states.

Frequency bands	Maximum output power (ERP)
863-870Mhz	5.47 dBm
